This is just a short summary - the complete file is only available against undersigned NDA!

Back >

This Project is a privately owned Germany company which develops and produces innovative surgery tools for the healthcare sector. It's business model starts from the beginning of the traditional surgery tool manufacturing industry, and covers the Supply Chain. Only the Distribution, Selling and Support will be offered directly by distribution partners worldwide. Because of low cost structure and high price levels there exists a big margin for all participants, for the producer and its distributor partners.

There is neither a Quality Risk (obligatory reports FDA, internal Quality checks) nor Payment Risk (strong and longtime relationship to Distributors).

This Project's innovative product is worldwide the only model, where the battery will remain within the machine while being sterilized (NRB Technology).

Company Overview

3 simple steps to receive investorsdesk

IF INTERESTED IN THIS PROJECT

1. Send filled request form
2. Sign sent NDA and send it back
3. Receive detail company information
